

Select a coffee dispenser and make sure that it is empty before starting a brew cycle.

Make sure the dispensers cover plug is in the opened position.

Select the desired batch button and push and hold for two seconds. The stop button will illuminate and the batch button will begin to flash. This indicates that the brew cycle has begun.

When the brew cycle is complete the stop button will go dark and the brew light will continue to flash for an additional timed cycle. This indicates the brewer is now in the drip delay. **DO NOT REMOVE BREW BASKET HOT COFFEE MAY STILL BE FLOWING OUT OF THE BREW BASKET.**

After the brew light stops flashing and you have verified that coffee is no longer flowing from the brew basket, you may remove the brew basket and dispose of the spent filter and coffee grounds.

Move server to the dedicated serving area.

To help provide for maximum hold and serving time please make sure that the dispenser cover plug is in the closed position.
