

HOW TO USE YOUR LUXUS[®] THERMAL DISPENSER

Preheating or precooling of the dispenser is highly recommended. Before the first brew of the day, fill the dispenser at least ½ way with water from the brewer. Let the water sit inside for 5-10 minutes, then drain out completely. This will extend the time that the beverage can be served at optimum temperature.

To open the dispenser, first unscrew the plug on the top by turning it counterclockwise till it stops.

Next, grasp the top of the handle from the front and pull it down completely toward you.

The dispenser is now open and ready for brewing.

To close the dispenser, move the plug and swing arm into position with the dispenser opening.

Move the handle to its upright position. Be sure that the handle is straight up-and-down.

Screw down the plug tightly to prevent any spillage while carrying. The dispenser may now be transported to any remote location.
