

## GRINDER OPERATING INSTRUCTIONS

Before grinding be sure that the power is on.

Lift the grinder lid and make sure the hopper is in place.

Remove the black hopper lid and fill the hopper with the correct whole bean coffee. After the hopper is filled replace the black hopper lid and close the grinder lid.

Place a paper filter in the brew basket and slide the brew basket into place under the grinder.

Select the correct batch size. When you hear the grinder stop it is safe to remove the basket from the grinder. Shake the brew basket from side to side gently to level the coffee bed. You now have ground coffee to brew with.
