Subject: Sight Gauge Tubes & Parts

Date: June 30, 1999

Applies to: All Dispensers

The Sight Gauge serves as an indicator for the amount of coffee in the Coffee Dispenser. Sight Gauge Tubes may be polycarbonate plastic or glass. Glass has excellent optical properties, is inert, easily cleaned, but fragile. Plastic has fair performance and cleaning properties, lasts longer as it is not as liable to break. Plastic can flex and distort during installation and use.

The tube is cleaned with a sight gauge brush. FETCO recommends extra sight gauge tubes and gaskets be on hand as spare parts along with a sight gauge brush. Sight Gauge Tubes are not industry standardized, and must be purchased for the specific application.
