Subject: Brew Valve Replacement Kit
Applies to: CBS-2051, 2052, 2051e, 2052e & 2052e20

Date: November 28, 2005
Rev. February 23, 2006

The brew valve used on the models listed above has been changed to a compatible valve from a different manufacturer, Beta Valve. It is a direct replacement for the original valve.

New part numbers have been assigned for the replacement valve kits:

- Part # K054 brew valve replacement kit, 120VAC (For USA/Canada versions)
(Replacement for part # 57042 valve assy.)
- Part # K055 brew valve replacement kit, 230VAC (For EXPORT versions)
(Replacement for part # 57075 valve assy.)
- Part # K057 valve rebuild kit, Beta
(Includes diaphragm, spring, and plunger)

On some brewers, the existing white neutral wire piggy-back connector will not fit on the new valve. For this reason, a white wiring harness is provided to replace the existing harness. If the existing piggy-back connector fits, the new wiring harness is not needed.

The ground terminal on the new valve is not used.
