Subject: Cascading Spray Dome
Applies to: See Below

Date: September 11, 2008
Rev. June 8, 2009

The following brewer models are now being manufactured with Cascading Spray Domes (CSD) instead of spray plates:

CBS-2031e	CBS-2031s	CBS-2041e	CBS-2051e	CBS-2052e20
CBS-2032e	CBS-2032s	CBS-2042e	CBS-2052e	TBS-21A

The CSD had previously been available only on the CBS-2021 Series and ECO Series brewers.

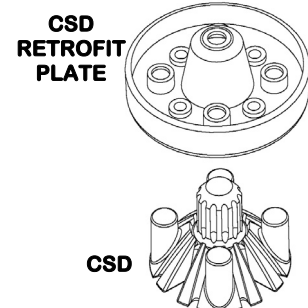

The CSD distributes water evenly over the coffee grounds and is a replacement for the spray plate used previously. The CSD is held in place by magnets, making it easier to remove and attach than the spray plate. It has no holes, making it easier to clean. It does not retain hot water above it, making it safer.

In addition to this production change, two CSD retrofit kits are available for modifying existing brewers with spray plates. The kits include the CSD, retrofit plate, sticker, screws, and instructions.

Part # K079 CSD retrofit kit, small

For the following models with 4 7/8" spray plates:

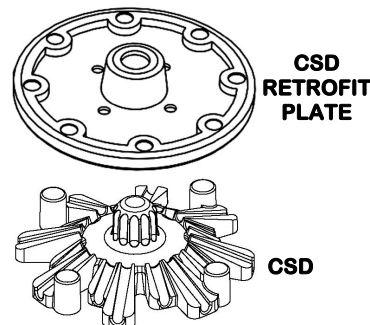

CBS-2031	CBS-2031e	CBS-2041e	TBS-21H
CBS-2032	CBS-2032e	CBS-2042e	TBS-21A
CBS-2041	CBS-2031s	CBS-18	
CBS-2042	CBS-2032s	CBS-2018	

Part # K080 CSD retrofit kit, large

For the following models with 5 7/8" spray plates:

CBS-2051	CBS-2051e
CBS-2052	CBS-2052e
	CBS-2052e20

FETCO recommends that a qualified service technician install the CSD retrofit kit. After installation, brew test batches to verify proper brew levels. If necessary, adjust the brew valve flow rate as described in the brewer's Programming Instructions – Address 60/61.
