Description & Features

The CBS-2060e EXTRACTOR® Series coffee brewers feature our patented intermittent spray over technology and patented Cascading Spray Dome.

The following variables are programmed for each batch size:

· Brew volume

Brew time

Bypass percent (Percentage of the brew volume)

- Prewet percent (Percentage of the brew volume)
- Prewet delay (The time between prewetting and the brew cycle.)
- Drip delay (The time between the end of the brew cycle and the unlocking of the brew basket.)

Using these variables, the software calculates how much water to use for prewetting, bypass, and brewing. The total brew time is divided into several 30 second cycles. Within these cycles, the software calculates how long to spray water over the coffee grounds, and how long to pause before the next cycle begins. The bypass valve opens at the beginning of the brew cycle and dispenses the correct amount of water all at once.

Features

- Three fully programmable batch sizes per side
- Adjustable prewetting cycle
- Adjustable bypass
- Fully addressable brew programming routine
- Brew temperature protection
- Brew basket safety locks
- Cascading Spray Dome for enhanced extraction.
- Electronically controlled hot water service

Specifications

Requirements

Water Requirements:

CBS-2061e: 20-75 psig, (138-517kPa) 2 gpm (7.6 lpm) CBS-2062e: 20-75 psig, (138-517kPa) 4 gpm (15.1 lpm)

- Water inlet fitting is a 3/8 inch male flare.
- ❖ Brew Volume:

Full Batch 3 gal. (11.4 lit.) Half Batch 1.5 gal. (5.7 lit.) Coffee Filter Size:

20" X 8" – standard FETCO # F004 18" X 7½" - optional half batch FETCO # F005

- Electrical: See electrical configuration chart.
- Temperature:

200°F (93°C) inside water tank (at sea level) 195°F (91°C) ± 5° at sprayhead

Weights and Capacities

Brewer Model	Weight (empty)	Water tank Capacity & Weight.		Weight (filled)	*Dispenser Weight, ea.	*Dispenser Filled, ea	*Total Weight Brewer & Dispensers, Filled
CBS-2061e	91 lbs.	8.7 gal.	72 lbs.	163 lbs.	18 lbs.	42.5 lbs	205.5 lbs.
	(41.3kg)	(33 l)	(32.7kg)	(74kg)	(8.2kg)	(19.3kg)	(93.2kg)

⁽¹⁾ Based on standard factory settings: 4.5 minute brew time; 0% prewet, 0% bypass; 200 F water.

⁽¹⁾ Based on standard factory settings: 4.5 minute brew time; 0% prewet, 0% bypass; 200 F water.

Dimensions & Utility Connections

Installation

(For Qualified Service Technicians Only)

Keys To A Successful Installation

If not installed correctly by qualified personnel, the brewer may not operate properly and damage may result. Damages resulting from improper installation are not covered by the warranty. Here are the key points to consider before installation:

Electrical:

- ❖ All FETCO brewers require **NEUTRAL** unless equipped with an optional factory-installed step-down transformer. Ground is not an acceptable substitute for neutral. Installation without neutral may cause the brewer to malfunction.
- The installation must comply with applicable federal, state, and local codes having jurisdiction at your location. Check with your local inspectors to determine what codes will apply.

Plumbing:

- This equipment is to be installed to comply with the applicable federal, state, or local plumbing codes.
- Flush the water line and water filter thoroughly prior to connecting it to the brewer to prevent debris from contaminating the machine.
- ❖ Verify that the water line will provide at least 2 gallons per minute/(7.6 lpm) at 20-75 psig/(138-517kPa) for the CBS-2061e, and 4 gallons per minute/(15.1 lpm) at 20-75 psig/(138-517kPa) for the CBS-2062e before connecting it to the brewer. Note that this is a high flow rate for beverage equipment.
 - This equipment goes to a fault state and will signal an error code if water flow is insufficient.

General:

Utilize only qualified beverage equipment service technicians for installation.
A Service Company Directory may be found on our web site, http://www.fetco.com.

Installation Instructions

Brewer Setup

- 1. Review the Dimensions for the unit you are installing. Verify that the brewer will fit in the space intended for it, and that the counter or table will support the total weight of the brewer and dispensers when filled.
- The brewer's legs are shipped inside the brew baskets. Remove the brew basket(s) and the coffee dispenser(s). Place the brewer on its back and screw in the legs.

Warning: Legs are to be adjusted for leveling the brewer only. Do not use for height adjustment or extend them higher than necessary.

- 3. Place the brewer on the counter or stand.
- 4. When the brewer is in position, level it front to back as well as side to side by adjusting the legs.
- 5. Remove the lower cover to access the water and electrical connections. Knock-outs are provided in the back and base of the brewer body for the connections.

Water Connection

- 1. Water inlet is a 3/8 inch male flare fitting.
- 2. The brewer can be connected to a cold or hot water line. Cold water is preferred for best coffee flavor, but hot water will allow for faster recovery times.
- 3. Install a water shut off valve near the brewer to facilitate service. If an in-line water filter is used, it should be installed after the water shut off valve and in a position to facilitate filter replacement.
- 4. Flush the water supply line and filter **before** connecting it to the brewer.
- 5. Verify that the water line will provide at least 2 gallons per minute/(7.6 lpm) for the CBS-2061e, and 4 gallons per minute/(15.1 lpm) for the CBS-2062e, and that the water pressure is between 20 and 75 psig/(138-517kPa).
- 6. Use a wrench on the factory fitting when connecting the incoming water line. This will reduce stress on the internal connections and reduce the possibility of leaks developing after the install has been completed.

Electrical Connection

- 1. Verify that the actual voltage at the electrical service connection is compatible with the specifications on the brewer's serial number label. Make sure the electrical service includes **neutral**.
- 2. The temperature and water tank fill level are pre-set at the factory. There is no need to turn off the heaters during the installation process. The heaters are disabled by the control board until the tank is full of water. The heating process will start automatically when the tank has filled.
- 3. A terminal block is provided for connecting the incoming power wires. Consult local codes to determine if a cord and plug can be installed, or if the unit must be hard wired.
- 4. A fused disconnect switch or circuit breaker on the incoming power line must be conveniently located near the brewer, and its location and markings known to the operators.

 Warning: To prevent
- 5. The body of the brewer must be grounded to a suitable building ground. A ground lug is provided in the brewer next to the power terminal block. Use only 10 gauge copper wire for grounding.
- 6. Electrical connections must be secured in-place within the unit to meet national and local standards.
- 7. Connect the incoming power wires to the terminal block in accordance with applicable codes.

Electrical Configurations – US & Canada

CBS-2061e and CBS-2062e Single Phase

CBS-2061e and CBS-2062e Three Phase

electrical shock, this

unit must be properly

arounded.

Safety notes.

Professional installation is required. This appliance is manufactured for commercial use only.

Operation requirements and maintenance for commercial cooking appliances differ from household appliances.

Operators must be trained for this equipment and must understand the use, maintenance and kitchen hazards.

Do not attempt to move the CBS-2061e or CBS-2062e once it is filled. Drain equipment before moving.

The CBS-2060e coffee brewers prepare up to three gallons of coffee or tea in a single batch using very hot water. The factory set brew (default) time is 4.5 minutes with the brew basket locked for safety from start of brew. The brew basket unlocks and may be serviced 8.5 minutes after starting the brew. Never attempt to defeat or override the brew basket locking feature.

EXTRACTOR® coffee brewers include a hot water service tap for kitchen purposes.

The hot water service tap is operated by the electronic touchpad and may be completely disabled by entering operator access programming. (see PROGAMMING - beginning page 9)

Keep these instructions for training and future reference

Final Setup

- 1. Turn on the incoming water supply line and inspect both inside and outside of the brewer for leaks in all fittings and tubes
- 2. Turn on the incoming power.
- 3. Press the brewer's main power switch, which is hidden behind the front leg of the brewer. The control panel on/off switch will begin flashing. Press this switch while it is flashing.
- 4. Within 6 seconds, the hot water tank will begin filling until the water is sensed by the probe at the top of the tank. The display will read "FIL". The heaters will be disabled by the control board until the tank is full.
- 5. While the water is heating, the display will read "LO" and the actual water temperature will be displayed. After the water has reached the set temperature, the display will be blank. There is no "readv" light.
- 6. Review the Operating Instructions. Brew one full batch (water only) on each side to confirm proper fill levels. The brewer is factory set with water only (no coffee) to dispense the correct amount of water. If the actual volume is slightly different from the programmed volume, fine tuning the brewer may be necessary. See #60 63 in the Advanced Settings & Diagnostics section.
- 7. Re-attach the covers after one final inspection for leaks. Look closely in the top of the brewer at the dispense fittings during this inspection.

Operator Training

Review the operating procedures with whoever will be using the brewer. Pay particular attention to the following areas:

- Always pre-heat the dispensers before the first use of each day by filling them half way with hot water, and letting them stand for at least 15 minutes.
- 2. Don't remove the brew basket until it has stopped dripping.
- 3. Make sure the dispenser is empty before brewing into it.
- 4. Show how to attach covers, close, and or secure the thermal dispensers for transporting.
- 5. Show the location and operation of the water shut off valve as well as the circuit breaker for the brewer.
- 6. Steam from the tank will form condensation in the vent tubes. This condensation will drip into and then out of the brew baskets. 1/4 cup discharging overnight is possible. Place an appropriate container under each brew basket when not in use.
- 7. We recommend leaving the power to the brewer on overnight. The water tank is well insulated and will use very little electricity to keep the tank hot. Leaving the brewer in the on position will also avoid delays at the beginning of shifts for the brewer to reach operating temperature.

Operating Instructions

Control Panel Functions

Only switches that are active are illuminated. Switches that are inactive or disabled are invisible.

Main Power Switch

- □ Controls all power to brewer
- □ Indicator lamp at top of panel.

2 Control Panel On/Off Switch

□ Secondary power switch. Does not

disconnect main power.

- □ Flashing = Off
- □ Lit = On
- □ Invisible = Main Power Off

3 Display

- "FIL" = Water tank is filling.
- □ "LO XXX" = Unit is heating, not ready to brew. (XXX = actual temperature)
- □ "NO BAS" = Brew basket not in position.
- □ Blank = Ready to brew.
- □ Also displays error messages.

Stop Switches

- □ Stops brew cycle
- □ Lit = Brew cycle in progress
- □ Invisible = Not brewing, or dripping in progress

5 Brew Switches

- □ Starts brew cycle
- ☐ Must be held in for 1 second
- □ Flashing = Brew cycle in progress
- □ Lit = Ready to brew
- □ Invisible Not ready to brew, or batch disabled (See Programming Section)

6 Hot Water Switch

□ Dispenses hot water from faucet

□ Hold in to dispense

Brewing

- 1. Turn the main power switch and control panel switch on.
- 2. Prepare a brew basket with the correct size filter and appropriate amount of coffee.
- 3. Slide the brew basket completely into the
- 4. Place a clean, empty, preheated dispenser under the brew basket.
- 5. Select a batch from the available choices, and hold the corresponding BREW button in for 1 second to start the brew cycle.
- 6. The STOP button will illuminate, and the selected BREW button will flash, indicating that brewing is in progress. All other BREW buttons will extinguish.
- 7. When the brew cycle is finished, the STOP button will extinguish and the BREW button will continue flashing, indicating that coffee may still be dripping from the bottom of the brew basket.
- 8. Before removing the brew basket or dispenser, visually verify that dripping has stopped.

Notes:

- Preheat dispenser by filling at least ½ full with water at brewing temperature. Allow it to sit for at least 15 minutes before draining.
- A sensor is provided to prevent the brewer from operating if the brew basket is not all the way in.
- A brew basket lock will prevent removal of the brew basket during brewing and dripping

Programming-operator access programming

Batch Settings

Display

- Turn the brewer off by pressing the main power switch.
- Press the main power switch again to turn the unit on.
 The last 2 digits of the model number will display briefly, then S t b.

62 S t b

Quickly hold the STOP button for 3 seconds.

PrG

The display will show the software version. Example:

0.0 4.8

- Press STOP to continue. Press STOP again to exit.
- ❖ Batches are numbered 1 − 3 (CBS-2061e) or 1 − 6 (CBS-2062e)

Example:

Left Side - Large Batch - Volume 3.0 Gal.

Next, the first batch parameter is displayed – batch 1, brew volume Use the SCROLL UP and SCROLL DOWN buttons to adjust. Press the STOP button to go to the next parameter – brew time. 1.1 3.00

1.2 4.30

Continue this way until all parameters are programmed for batch #1. (See the chart below for an explanation of each parameter.)

2.0 OFF

Next, batch #2 programming begins.
 Batches 2, 3, 5, and 6 may be disabled by leaving them set to "OFF".
 Change to "ON" to enable. Batches 1 and 4 cannot be disabled.

7 200

After all batches are programmed, go to temperature settings.

(See next page)

Important! After programming, you must press the HOT WATER button to save the settings and exit programming mode, or changes will be lost. You may exit programming at any time.

!!! ► If you press the wrong button turn power switch "OFF" and begin programming again!!!

Batch Parameters

X=Bato	X=Batch Number (1 - 6)							
Parameter	Nene	Range	Increment	Default Setting	Comment			
X. 0	Batch Enabled/Disabled	On/Off	1-6	Batch <u>1</u> & <u>4</u> = <u>ON</u> Batch <u>2</u> , <u>3</u> , <u>5</u> , <u>6</u> = <u>OFF</u>	Batch 1 & 4 cannot be disabled.			
X. 1	Brew Volume (Gallons)	0.5 – 4.00	0.01	3 gal. (2061e/2062e)	To display liters, see # 59 in Advanced Settings section.			
X. 2	Brew Time (Min:Sec)	3:00 – 15:00	0:30	4:30 minutes:seconds	Add brew time to drip delay time and prewet for time of one batch.			
X. 3	Bypass Percent	0.00 – 40.0%	1%	0 %	Percentage of total brew volume			
X. 4	Prewet Percent	0.00 – 15.0%	1%	0 %	Percentage of total brew volume			
X. 5	Prewet Delay (Min:Sec)	0:10 - 5:00 Units: min/sec	0:10	1:00 minutes:seconds	The time between prewetting and start of brew cycle.			
X. 6	Drip Delay (Min:Sec)	1:00 — 8:00 Units: min/sec	0:10	4:00 minutes:seconds	The time between end of brew cycle and unlocking of brew basket.

Error Codes

Code	Description	Possible Cause	Corrective Action	How to Clear Error Codes
001	Internal Error System had to reload default settings.	Control board failure.	Clear error. Re-program the brewer to the desired specifications. If error occurs again, replace control board.	Turn main power switch off and on.
050	Shorted temperature probe.	Probe failure.	Replace probe.	Turn main power switch off and on.
051	Open temperature probe.	Bad probe connection, or probe failure.	Check all connections. Replace probe if necessary.	Turn main power switch off and on.
075	Brew basket lock or sensor failure. Basket was in place when brew cycle started, but	Brew basket sensor or lock has failed.		Press the flashing control panel power switch to resume operation.
	was pulled out during the brew cycle. If this error occurs, the brew basket lock has failed.	Magnet in brew basket handle is missing or loose.	Remove brew basket handle. Place magnet in correct position.	
100	Initial Fill Error Initial fill time was more than 15 minutes.	Water supply flow rate is too low.	Watch for short potting during brew cycle. Investigate cause of low flow rate. (Clogged water filter, etc.)	Press the control panel power switch.
101	Error on refill Tank did not refill within 3 minutes.	Water supply flow rate is too low.	Watch for short potting during brew cycle. Investigate cause of low flow rate. (Clogged water filter, etc.)	Error message is cleared automatically at end of brew cycle.
102	Unwanted Fill When brewer is idle, the fill valve was activated for	Possible leak in tank, fitting, or valve.	Check inside of machine for leaks.	Turn main power switch off and on.
	more than 30 seconds during a 1 hour period.	Output on control board has failed, causing a dispense valve to open.	Replace control board.	
200	Flat Line Temperature (Water is boiling) System is calling for heat, but the temperature does not rise at least 2°F within 10 minutes.	Triac is stuck closed, bad output on control board, or temperature is set too high for altitude.	Check triacs, check control board output, or adjust temperature for altitude.	Turn main power switch off and on.
201	Heater Open System is calling for heat, but the temperature does not rise at least 2°F within 10 minutes. This error is disabled during brewing and while using the hot water faucet.	Heating element failure.	Check and replace heating elements if necessary.	Turn main power switch off and on.
255	Keypad Error A switch was pressed for more than 45 seconds.	Switch was held in too long, or switch is stuck closed.	Clear error and try again. If error occurs without switch being pressed, replace input board.	Turn main power switch off and on.

All CBS-2061e and CBS2062e brewers And all other CSD VERSIONS: USED AFTER APRIL, 2011

Cleaning & Maintenance

Daily: Wipe the area above the brew basket to remove coffee residue.

Daily or Weekly:

CSD Versions:

Clean the Cascading Spray Dome (CSD) with a soft brush and detergent. It may also be cleaned in a dishwasher – top rack only.

The CSD is held in place by four magnets. To remove it, grasp the bottom and pull down.

Quarterly:

- Check water temperature, adjust if necessary.
- · Check brew levels, adjust if necessary.
- Inspect all fittings and hoses for leaks.
- Inspect inside of tank for lime deposits. De-lime tank and probes if necessary.
 This procedure should be done by a qualified service technician

Before cleaning, be sure that all residual coffee in the dispenser has been emptied out. Next, fill the dispenser 1/4 to 1/2 full with hot water. If desired, an appropriate cleaning solution may also be used. Follow manufacturers recommendations for cleaning.

Daily Cleaning:

First, remove the black funnel assembly. Then, using a cleaning brush, scrub out the liner thoroughly, loosening coffee oils into the water.

Empty out the dirty water, either through the faucet or simply by tipping the dispenser over and dumping out through the top opening.

CAUTION: Never immerse the dispenser completely in water or run through any dishwasher.

Weekly Cleaning:

Remove sight gauge tube and clean with water and/or cleaning solution, using a small sight tube brush.

Unscrew the faucet and remove the rubber seat cup. Clean using the sight tube brush.
